

Job Description Form

08/04/2026

Intern, Associate Software Engineer

Date

Position Title

The job responsibilities outlined in this document are not exhaustive and may evolve over time and be reviewed according to business needs.

ROLE DESCRIPTION SUMMARY

This role supports the engineering team in building and maintaining backend software for airborne connectivity systems used in commercial aviation. By translating requirements into reliable, high-quality technical solutions, the role directly contributes to delivering scalable, mission-critical airborne broadband services.

PRIMARY RESPONSIBILITIES / KEY RESULT AREAS

Software Development & Delivery: Develop, enhance, and maintain backend software components for airborne connectivity systems by implementing assigned user stories and technical tasks under guidance.

Requirements Analysis & Technical Support: Analyse functional requirements and collaborate with technical leads and team members to translate requirements into working software solutions.

Testing, Automation & Quality Assurance: Create and execute unit and integration tests, support test automation, and ensure adherence to defined engineering quality and coding standards.

Agile Team Participation & Collaboration: Participate in Agile ceremonies, collaborate with cross-functional teams, follow established processes, and contribute to continuous improvement and learning.

Job Description Form

Role Context:

- Supervisory Responsibility: None
- Level of Independence: Works within defined guidelines and under technical supervision
- Decision Making: Decisions impact assigned tasks; recommendations reviewed by senior team members
- Problem Solving: Addresses routine to moderately complex technical issues using established practices

COMPETENCIES

Behavioural Competencies

- Customer Focus
- Winning as a Team through Collaboration
- Courage and Accountability
- Agile Decision Making
- Effective Verbal and Written Communication

Technical / Functional Competencies

- Software Design, Development, and Testing
- Programming in Java / C++ / Go / ReactJS
- Object-Oriented Programming and Data Structures
- Knowledge of IP Networking
- CI/CD and Engineering Quality Practices
- Flexibility in Learning New Technologies
- Awareness of AI usage in web applications or microservices

QUALIFICATIONS & EXPERIENCE

- Master's or bachelor's degree in computer science, electronics engineering or related technology – advanced degree preferred with 0–2 years experience (including academic projects or internships)
- Good development experience with Java / C++ / Go / Java / ReactJS
- Good knowledge on OOPs and Data structures
- Knowledge of IP networking protocols and technologies
- Ability to work under pressure, prioritize work, coordinate with onsite stakeholders and well organized.
- Flexibility in working with technologies and platforms.
- A commitment to excellence, best practices, and the continuous improvement of our products, code base, processes, and tools.
- Knowledge of using Artificial Intelligence to solve use cases

OTHER KEY REQUIREMENTS

- Timely delivery of assigned tasks with quality.
- Adherence to coding standards, testing, and Agile processes.
